IRRIGATION
PROGRAMME
(VIP)**

Designers and manufacturers of

WHAT IS VIP?

The Visual Irrigation Programme (VIP) is a graphical feature that can be added to your Gemini or Trident PC irrigation system. Once configured, this allows the operator to review, revise, diagnose and program GTI quickly and easily. It is equally useful in golf, sports and landscape applications.

Pictures of the site areas and the use of colour-coded symbols, give the user an immediate system status at a glance.

- View Group station data
- View the entire site – up to 8 sites
- Or a section view – up to 22 sectors per site

MULTIPLE
WAYS TO
VIEW

SETTING UP THE VIP

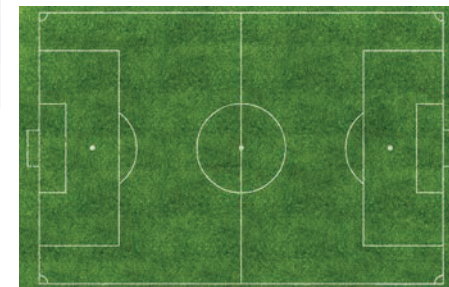

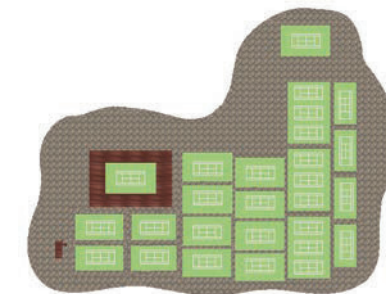

Use pictures of your actual site that make sense to you.

VIP allows you to import pictures of your golf course, pitch or site, in a variety of different ways including:

- Aerial pictures / CAD
- Artist impression
- Stroke Saver artwork
- Hand drawn pictures

Once you have decided on the type of pictures you want to use, we then process your images and apply the station and sprinkler information to them.

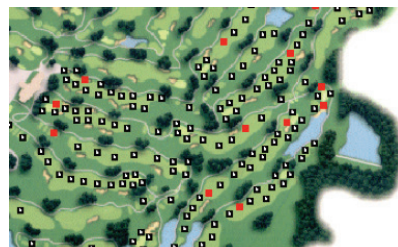

SEE IT HOW
YOU WANT
TO SEE IT

PROGRAMMING AND DIAGNOSTICS

With VIP you can quickly select the complete site, a specific area or just one station and do any of the following:

- Include or exclude stations
- Increase or decrease watering (mm)
- Change run times
- Perform diagnostics
- View historical records (user defined)
- Circle a selection of your choice
- Instantly see field faults and station status

EVERYTHING
BECOMES
INSTANT

FEATURES AND BENEFITS

- Write and review irrigation programmes
- View the progress of running irrigation programmes
- Manual station operation
- Advanced diagnostic tests
- Instant graphical overview of all the station issues detected within a user-selectable period
- Real time course or hole view of stations currently being irrigated
- Real time course or hole view of all station issues
- Individual station statistics for accumulated water application and running time
- Preview scheduled irrigation with an accelerated simulation shown on the VIP
- Suitable for either golf or landscape applications
- VIP centre* allows the end-user or installer to easily make small adjustments to the map configurations
- Include or exclude an entire area with just a few mouse clicks

VIP Centre only available in V3.00 and above

FEATURES AND BENEFITS

- Identify field errors and faults
- Difficult to name areas can be identified more easily
- Avoid missing out key areas that must be irrigated.
- Select areas or stations by circling the area containing the stations required
- More intuitive than making selections from lists.
- Use images from a variety of sources which are unique to your own course or landscape site
- Include or exclude entire areas with one click
