Installation Applications for Communication Boosters.

October 2017

GTI-SB-080-1117-GB

Distribution Regions: All Regions

Product Relevance: PC, EC

For use by: Distributors, Consultants, Contractors and End Users.

Communication Boosters, Bailoy Part GTI-COM-BOO-S, are wall-mounted devices that enable a DOU to be installed up to 1600 meters from the computer or another DOU.

One Communication Booster is mounted next to the computer, while the other is installed next to the DOU. These are joined together by a cable as specified in Technical Directive GTI-TD-048

Some example applications are:

1. When the distance between the computer and DOU(s) exceeds 20M.
2. Installing a DOU close to the area that needs to be irrigated which allows for savings in control cables.
 - a. Shorter cable lengths can also greatly improve the reliability of a system.
3. Locate Expansion DOU(s) near an extended area such as:
 - a. A 9-hole extension or academy course
 - b. Additional training pitches, courts or planted areas
