## Power Requirements for DTMF Interface & Communication Boosters

January 2015

GTI-TSD-029-0115-GB

Distribution Regions: All Regions

Product Relevance: PC, EC

For use by: Distributors, Consultants, Contractors and End Users

This bulletin explains the power requirements for the GTI DTMF Interface and Communication Boosters in more detail.

Each of these GTI devices must be connected to a separate 12V power adapter (Bailoy Part# GTI-PA-UNI)

This adapter can be either a 12V<sub>AC</sub> or 12V<sub>DC</sub> model and must be able to supply at least 500mA. Note that the power input of these two GTI devices is not polarity sensitive.

Some desktop radios can be used to also power other external devices.  
Do **not** power GTI devices from the radio (Or the radio power supply).  
This can cause irreversible damage to the GTI device and the radio equipment.
