## Remote Access for GTI Systems

July 2020

GTI-TSB-087-0720-GB

Distribution Regions: All Regions

Product Relevance: PC, EC

With the ever-increasing reliability of web-enabled communication, you can now access your GTI irrigation system using GTI REACH remote access.

Before installing GTI-REACH, you need to check you have a good, stable internet signal:

1. Where the computer or tablet is currently located or will be installed
2. Wherever you intend to access the system from with your internet enabled device.

If your signal strength is not good or stable, remote access will be intermittent and unreliable. If this is the case, or you do not have internet at all, you can now install a 4G Router. For further information on this see Bulletin GTI-TSB-088

Users should also be aware that the internet enabled device used to access the GTI tablet will use a data allowance and depending on your supplier and plan, could be costly. Therefore, you are advised to check these costs with your provider and to log off when not using remote access to control your system.
